

Certificate in Nanotechnology (CNT): Part 2

Program Overview

The Certificate in Nanotechnology curriculum is based on two parts that explore the fundamentals of Nanotechnology. The second part of the curriculum will take an in-depth look into Nanoscale impacts on Macroscale, Crystals and Other Solids, Sand to System Processes and Devices, Device Fabrication and Transistor Operation, Optical Properties, and Optical Devices. Upon completion of this two part program students will have an advantageous position to formulate and implement nanotechnology-based solutions as part of the science and technology workforce in industry, government, and academia.

Certificate Requirements

<p>Fundamentals of Nanotechnology II CNT2</p>	<p>Material Science & Structure Semiconductor Devices Optical Properties & Devices</p>
